

Topic: Platform to find other students to study with remotely or in person

Author: Jan K Faris Garcia

Date: 08/29//22

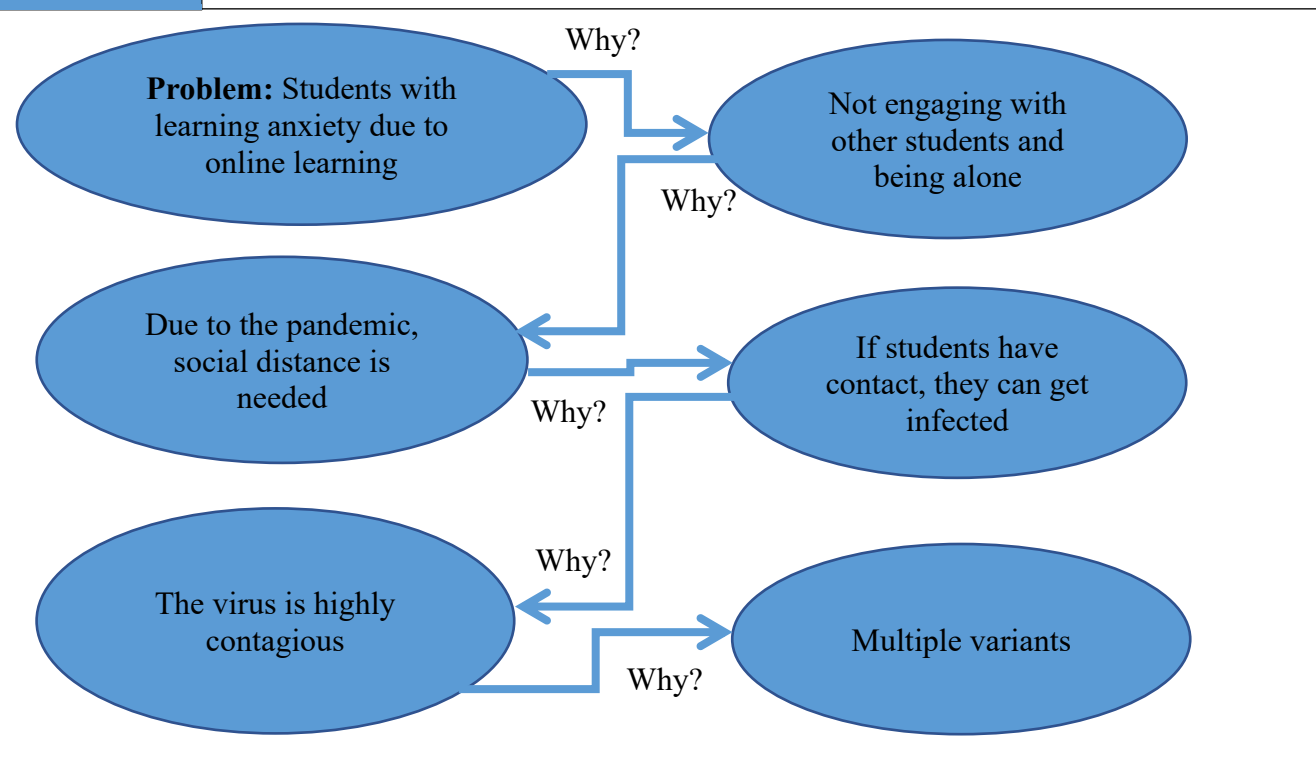

Problem Background

- During the pandemic, all students are forced to remain and study from their homes. This causes anxiety and makes difficult to carry with the academic responsibility.
- On the article, *An Analysis of Student Learning Anxiety During the COVID-19 Pandemic: A Study in Higher Education*, it is mentioned that students' learning anxiety at the Universitas Raharja Indonesia during the COVID-19 pandemic showed that learning anxiety was 77.75% on the regular group (morning classes) and 81.05% on the non-regular group (afternoon classes).
- Some students are permitted to return to classes on campus, but others still struggle with the online learning.

Target

- To try to decrease the learning anxiety on students. To create a community of students that support each other and share knowledge about classes.

Causes

Countermeasures

- Create a digital platform where students from different classes and universities come together to share knowledge and support each other.
- Allow users to share a community by creating a personal profile and participate on forums, chat, and virtual rooms (Zoom, Microsoft Teams and Google Meets).
- Users have the option to meet in person on a preferred location to have study sessions.

Check/Evaluate

- To measure the success is the continued growth of users in the platform.
- To determine the usefulness of the platform, surveys may be provided to the users by asking if they feel less anxious and more confident in their classes.
- A measure of failure would be poor engagement from the users. Other way could be users reporting that prefer studying alone instead.

Act/Standardize

- Feedback from the surveys will be considered to further improve the platform to the need of its users.
- This platform could expand to other universities around the world and help more students.
